This Senior Design Project is brought to you for free and open access by the School of Engineering, Technology and Computer Science Design Projects at Opus: Research & Creativity at IPFW. It has been accepted for inclusion in Manufacturing & Construction Engineering Technology and Interior Design Senior Design Projects by an authorized administrator of Opus: Research & Creativity at IPFW. For more information, please contact admin@lib.ipfw.edu.

**Design and Evaluation of a Mechanical Means
of Separating Crude Oil From Sea Water**

Senior Design Project

MET 497

May 14, 1970

By

Phillip Steffen

TABLE OF CONTENTS

	Title	Page
Section I Introduction		
I-1	Reason for Project	1
I-2	Method of Action	2
J-2	Scope of the Total Project	2
Fig. 1	System Layout	3
I-4	Scope of the Project of Separation	4
I-5	Separation Project Goals	5
I-6	Basic Operating Principles	6
Section II Design Section		
II-1	Cone Type Separator	7
Fig. 2	Cone Separator	8
II-2	Hydrocyclone Separator	9
Fig. 3	Hydrocyclone	10
II-3	Centrifugal Separator	11
Graph 1	Rise Time Due to Gravity	14
Graph 2	Rise Time Due to Centrifugal Force	15
Fig. 4	Dorr-Oliver Centrifuge	17
Fig. 5	Flow Through Centrifuge Bowl	18
Section III Evaluation		
III-1	Compatibility with Rest of System	22
III-2	Parameters of the Separating System	22
III-3	Conclusion	23
	Appendix A	24
	Appendix B	27

ABSTRACT

Evaluate and design a suitable system for extracting crude oil from sea water, with special emphasis given to the volume capacity and efficiency of the system.
