DESIGN OF A SINGLE DEGREE OF FREEDOM SHAKE TABLE

Edward F. Pavicich, Gregory a. Freed

(Josué Njock Libii, Associate Professor of Mechanical Engineering)

Department of Engineering

This research and design was for the purpose of building and testing a single degree of freedom mechanical vibration shake table for the use of undergraduate institutions to facilitate testing of mechanical systems. This would in turn enable students to obtain experimental data of systems for comparison to their theoretical models which were constructed utilizing formal lecture material.
