ABSTRACT

This report contains the design, fabrication and testing data for the automobile wheelchair loader-carrier. The wheelchair loader-carrier is attached to hitch supports, which are bolted to the bumper and frame of the car and extend out behind. The assembly is a weather-proof box with one side hinged to form a door. When the door is opened, it swings down to the ground to form a ramp. The wheelchair is pushed up the ramp and into the box. The ramp is then swung back into place and securely fastened. The whole assembly is hinged to allow access to the trunk.
