MET 497

Senior Project

Abstract

The project is to design, fabricate (at a cost of approximately \$75.00), and test a snow thrower that attaches to the front of a push-type rotary lawn mower. The unit utilizes the output shaft of the lawn mower's engine as the power source for the snow thrower. This unit called "Blow-Mow" cleans as effectively as the higher priced (\$200-300.00) snow throwers on the market today.
